(a) Evidence-based action selection

Frozen target contract

Audit evidence
Diagnosis + available artifacts

Deterministic action planner
Minimum justified change

Patch or recompute

Verify target restoration
Schematic
- ✓ Available pairwise surface
- ✓ TP / FP / FN
- ✓ All threshold rows

Complete check on declared surface

Pass → **Verified restoration**

Fail → **Stop: residual mismatch**

Already aligned / redundant → **No action / remove redundancy**

Insufficient evidence or inputs → **Abstain**
Request re-export
Do not compare

(b) Three real-artifact decisions

Redundant propagation
Evaluator already propagates
→ **Remove redundancy**

Ontology-contract mismatch
Pre-hierarchy scores retained
→ **Recompute under target GO**

Incompatible reported metrics
Continuous scores retained
→ **Recompute on a common grid**

Real recomputation replay: 12/12 score exports matched
1,188/1,188 threshold rows matched

Contract restoration, not demonstrated biological performance gain
